	<p>Nurdles, which are lentil-sized pieces of microplastics, are shipped all over the world and are eventually melted down and manufactured into everyday plastic products, such as water bottles or toothbrushes. However, millions of these microplastics are pouring into our ocean every day due to lack of regulations. While only tiny in size, these plastics have a huge impact on marine wildlife and their habitats.</p> <p>Together, we have the power to turn the tide on plastic pellet pollution by pushing the International Maritime Organization to act quickly and decisively to bring in stricter regulations when its Marine Environmental Protection Committee next meets in July.</p> <p>#NurdleAction</p>	<p>Suggestion: use the “We’re supporting Fauna &amp; Flora’s campaign... graphics”</p>
<p>Instagram</p>	<p>Every day, millions of plastic pellets (or nurdles) pour into our ocean. These lentil-sized microplastics affect a variety of species living in our ocean and can harm the habitats that they call home. Plastics like these also impact us too. They end up on our beaches and impact local communities that rely on fishing.</p> <p>@FaunaFloraInt are calling on @IMO_HQ to act now and put a stop to plastic pellets polluting our ocean. The IMO must take immediate action to significantly reduce the number of plastic pellets that end up in our ocean each year. Head over to Fauna &amp; Flora’s profile to show your support by signing their petition today.</p> <p>#NurdleAction</p>	<p>Campaign video can be found here: <a href="https://portfolio.fauna-flora.org:8095/2023_plastic_pellets_video/#/">https://portfolio.fauna-flora.org:8095/2023_plastic_pellets_video/#/</a></p> <p>You’re free to use any.</p>
<p>Facebook and LinkedIn</p>	<p>It’s time to put an end to plastic pellets polluting our ocean. We’re joining <a href="https://www.fauna-flora.org/">Fauna &amp; Flora International</a> in calling on the International Maritime Organization (IMO) to make regulatory changes to protect our ocean from nurdles. Sign the petition and help protect the ocean.</p> <p>Nurdles, which are lentil-sized pieces of microplastics, are shipped all over the world and are eventually melted down and manufactured into everyday plastic products, such as water bottles or toothbrushes. However, millions of these microplastics are getting poured into our ocean every day due to lack of regulations. While only tiny in size, these plastics have a huge impact on marine wildlife and their habitats.</p>	<p>Link: <a href="https://www.fauna-flora.org/nurdles">fauna-flora.org/nurdles</a></p>
